SUMMARY

Computer Systems Engineering graduate (QUEST Nawabshah) with hands-on experience in software development, web and Android applications, and data analysis using Python, Django, PHP/MySQL and Kotlin. Built a recruitment platform with NLP-based CV parsing (about 95% accuracy on ~100 test CVs), a competition registration website and a shop management system. Brings 2+ years of customer service, cashier and billing experience from a family business, along with strong problem-solving, teamwork and communication skills. Seeking remote or hybrid roles in Pakistan.

TECHNICAL SKILLS

Web: HTML5, CSS3, JavaScript, PHP, Django
Mobile: Kotlin, Android Studio
Languages: Python, Kotlin, JavaScript, PHP
Database: MySQL
AI & Data: spaCy, Scikit-learn, Pandas, NumPy, Matplotlib
Tools: Git, GitHub, VS Code, Ubuntu/Linux, MS Office
Concepts: OOP, Data Structures, DBMS

PROJECTS

C Cube Event Management System | HTML, CSS, JavaScript, PHP, MySQL *Solo project*

- Built a full-stack website for my department's annual C Cube (Competition, Computing and Creativity) event, working alone on the frontend, PHP backend and MySQL database.
- Users register for different competitions (programming, games and more), see the registration fee, pay, and complete their registration.
- Built an admin panel to add competitions, view registrations, check payments and approve registrations.

AI-Based CV Banking & Recruitment System | Kotlin, Django, spaCy *Final Year Project, 2025 – 2026 (group)*

- Recruitment platform with user login, CV upload, job posting, recruiter dashboard, AI-based job recommendations and video call interviews.
- Built the Kotlin app frontend and contributed to the Django backend.
- Developed the NLP CV parsing module with spaCy to extract name, email, education, experience and skills from CVs; about 95% accuracy on ~100 test CVs for parsing and job matching.
- Wrote the project proposal, documentation and final presentation.

Siraj UPS & Solar – Shop Management Software | Python, Django *Windows desktop app*

- Built a management system for a UPS and solar shop covering POS billing (search by name, SKU or barcode; cash, card or credit; PDF invoices with shop logo), inventory with low-stock alerts, and supplier purchases that update stock automatically.
- Added a customer credit (udhaar) ledger with payment recording and printable statements, shop expense logging, and repair-job tracking from Pending to Delivered.
- Added Admin and Cashier roles, shop settings and database backup/restore. Packaged as a portable Windows EXE with no installation, also usable from other shop PCs through a browser.
- Wrote the user manual and operations guide for the shop owner and staff.

Stock Price Prediction | Python, Scikit-learn, Matplotlib

- Regression model to forecast stock trends, with Matplotlib charts of the results.

EXPERIENCE

Customer Service & Cashier (Billing) | Siraj UPS & Solar, Family Business 2+ years

- Served customers directly, handled cashier duties and billing, and dealt with payments and day-to-day shop operations.
- Used this hands-on experience to design and build the shop's own management software (see Projects).

Python Development Intern | ARC Reactor Technology, Karachi (On-site) 4 weeks

- Built a weather forecasting app in Python using the OpenWeather API, with Matplotlib charts of the weather data.

Data Science & Analytics Intern | DeveloperHub Corporation (Remote) 6 weeks

- Cleaned and visualized 5 datasets using Python.

EDUCATION

Bachelor of Engineering in Computer Systems | QUEST Nawabshah 2022 – 2026
Intermediate (Pre-Engineering) | BISE Sukkur, Grade A 2020 – 2022
Matriculation (Science) | BISE Sukkur, Grade A 2018 – 2020

CERTIFICATIONS

Data Science Training | PITP, Sukkur IBA University Jan – Mar 2026
Google AI Professional Certificate | Coursera Aug 2026
Software Engineer Job Simulation | Forage Aug 2026

LANGUAGES

English (Professional), Urdu (Native), Sindhi (Native)
